EXPERIENCE

Current Role

Aug 2021 – Present

Algotrics / Interforce Web Development

- Leading a small development team under the Technical Lead, coordinating the design, implementation, and delivery of logistics-related features.
- Refactored and rebuilt the entire Visualization module, redesigning its architecture and data flow to achieve up to a 3000x performance improvement while significantly simplifying the overall structure.
- Led the development of numerous stock and inventory management enhancements, improving system performance, maintainability, and user workflows.
- Led the development of the new YouCar.nl site, delivering new features across both frontend and backend systems.
- Also shipped and continue to maintain CraigMarloch, Navigate North, and PlantBeeb — full websites (and companion apps) used daily by real customers.
- Continue mentoring junior developers, reviewing code, and driving technical improvements across logistics-focused projects.

FLAGSHIP PROJECT

Fully Offline, Secure AI Chatbot for Private Client Data

Designed and built an end-to-end, fully offline and self-hosted AI chatbot that lets a client query their own private business data without any information ever leaving their infrastructure, built for organizations with strict data-privacy, compliance, and security requirements. Designed for direct integration into Aerpport, giving users natural-language access to their own Aerpport data.

.NET Python PostgreSQL Qdrant Ollama RAG

AERPPOINT WEB APPLICATION — CORE MODULES

- Created a new module for handling invoices with connections to Exact and Twinfield accounting applications.
- Designed and built a module specifically for handling invoice and approval limits.
- Worked on the logic and UI for handling shipments to hubs and customers.
- Built a procedure for handling inventory stock entries and breakdowns.
- Built the module for displaying Power BI reports under a service principal user.

ALSO DELIVERED

- Craig Marloch Store:** Built the logic for importing products from the Floriday API.
- Interforce Reward Exchange:** Built the Reward Rules module for handling rewards based on configurable conditions.
- Navigate North:** Designed and developed software solutions for race navigation.
- PlantBeeb:** Played a key role in developing a plant encyclopedia encompassing a vast repository of botanical information and multimedia content.
- VDH Solar:** Built and maintained the corporate website for VDH Solar, a solar energy solutions provider.
- YouCar:** Led the development of the new YouCar.nl site, delivering new features across both frontend and backend systems.

Team Leader

Nov 2018 – Apr 2021

Aptech E-Projects

- School Administration Website:** C# MVC ASP.NET web application. C# with Microsoft SQL Server backend.
- Cake Shop E-Commerce Website:** PHP server-rendered web application. MySQL backend.
- Gift Shop E-Commerce Website:** Responsive static website built with HTML, CSS, and JavaScript.
- Tourism Management System:** Windows Forms frontend. C# with Microsoft SQL Server backend.
- Farm Management System:** Native Android application in Java. PHP & MySQL API backend.
